

Data Sheet

Flashing Tape

Description

Self adhesive flashing tape comprises of an aluminium foil with bitumen rubber adhesive. The tape is applied by simple hand pressure to give an immediate watertight seal which will continue to improve with time. The product is finished in lacquered grey to simulate lead. These flashings are used in both new and refurbishment applications. Please refer to the bitumen compound section of this catalogue for a suitable primer. Foil thickness 50 microns, adhesive thickness 1.3mm, weight 1.4kg/m².
